● Available now Remote or relocation · from Nantes, France English C1 · French native

Fullstack TypeScript developer, 4 years in production at Enedis, Système U and on my own SaaS. I ship with rstack, the open-source agent loop I designed: spec, failing tests, code, review.

EXPERIENCE

Spotime · Founder, fullstack developer
May 2025 – Present

Time-tracking SaaS for field crews · spotime.fr

- 3-surface product: web back office (admin/scheduling), employee mobile app (iOS/Android) and Electron desktop app for on-site clock-in (Windows Store). Replaces paper timesheets and month-end re-entry.
- Cold-called 150 construction companies with no traction, so I switched to personal care services, where prospects come in through the website.
- Clock-ins are stored local-first and synced as soon as the network returns, with no data loss or duplicates. GPS location is captured only at the moment of clock-in.
- Development assisted by a team of subagents (PO, architect, tester, developer, reviewer), framed by user stories, a DoR/DoD and TDD.

NestJS · TanStack Router · Expo/React Native · Electron · TypeScript · PostgreSQL · React · shadcn/ui · Plausible

Enedis · Fullstack developer, Enedis Lab
Sep 2023 – Sep 2025

France's electricity grid, Europe's largest smart grid (37M+ connected meters) · Enedis Lab builds apps for field agents

- Worksite inspection app (Pays de la Loire): ~15 field agents inspect ~3,000 contractor-run worksites a year for safety, schedule and work quality.
- Mon Orga, Enedis's company-wide org chart (41,000 employees): Nuxt 3 app and TypeScript REST API (AdonisJS, PostgreSQL), built as the single source of org data for internal apps. Fullstack developer in a team of 4.
- GitLab CI/CD (80% coverage gate, Checkmarx, Docker, auto deploy, health check); OIDC SSO, role-based access, rate limiting, no personal data stored locally.
- Quantified the time lost to cross-team CI/CD blockers and got a weekly sync set up with the Cloud and CI/CD teams.

Nuxt 3 · TypeScript · AdonisJS (Node.js) · PostgreSQL (SQL) · Docker · GitLab CI/CD · Symfony · AWS

U Tech · Fullstack developer, apprentice
Sep 2022 – Aug 2023

Tech subsidiary of Système U · team building the applications for its 28 warehouses

- Routing app: moves pallets to the loading dock.
- Loading app: loading those pallets onto trucks.
- Visited warehouses to watch operators use the apps and adjust them to how they work.

Vue · JavaScript · Java Spring Boot · PWA

PROJECTS

Reflex RAG · agentic RAG, Jev model judge vs LLM judge
github

- Agentic retrieval loop: after each result, a judge decides whether to search again.
- The judge is Jev, a small system-one model, escalating to Claude Haiku 5.5 only when uncertain.
- Against the same loop judged by Haiku: −73% p95 latency, −90% LLM output tokens, 58% cheaper, at equal accuracy.

Jev · Claude Haiku · Mistral embed · SQLite FTS5 · TypeScript · Bun

Cockpit · personal dev tool to supervise my AI agents, in progress
github

- One interface to supervise all my coding agents (Claude Code, Codex, OpenCode).
- Each agent works in its own git worktree; sessions, worktrees and histories are stored locally.
- Next step: remote control, to keep working from my phone.

node-pty · xterm.js · Electron · Bun · Turborepo · Playwright · React · TypeScript

EDUCATION

Master's in Computer Science & Information Systems · EPSI, France 2025
